What Purposes do Life Insurance Premiums Serve?

Answer.—They provide your dependants a guaranteed sum in the event of your death—or provide money for your old age.

Question.—What is done with the premiums you pay?

Answer.—The savings which you put into Life Insurance are combined with those of other policyholders and are carefully invested in the best interests of all policyholders.

Q.—What is the guarantee back of these invested funds?

A.—The security of the individual loans, in addition to the integrity of the borrowers—whether governments, corporations, or individuals.

Q.—Why are premiums called savings?

A.—Because, year after year, they build up the fund out of which payments to policyholders and beneficiaries are made.

Q.—How much of this money is paid out to policyholders and beneficiaries in Canada?

A.—Half a Million Dollars every business day.

This is the second of a series of messages sponsored by Life Insurance Companies operating in Canada. The third, to appear in two weeks' time, will discuss Life Insurance assets.

Life Insurance

Guardian of Canadian Homes

New Mail Route to Start.

Tomorrow, Friday, February 18th, the new rural mail route No. 1 starts operating. The new route is one of the largest hereabouts, some 42 miles altogether—replacing the rural route up until now operated by Mr. H. Michel from Stony Plain; and also cutting in on the mail route to Granville and to Golden Spike, which has been in operation for some time by Mr. Barnhart, from Spruce Grove postoffice.

The operator on the new mail route, when he leaves Stony, goes south towards the Golden Spike P. O.; thence across country to Holborn postoffice; and thence north to the Rosenthal district, completing the run at the Stony Plain P. O. There are approximately 70 mail boxes on the new line.

Mr. Mike Zucht has been awarded the contract for carrying the mail along this new route. This route will be covered twice a week.

Paul Werner Retires.

After being engaged in business here for about 15 years, Mr. Paul Werner has retired, and will be found henceforth at his bungalow on Second av. west. Mr. Werner came here from the village of Hay Lakes in the year 1923. His first position was in the employ of O. W. Rossell, the hardware merchant. He was a hardware expert, having previously been working for J. A. Werner, on the Edmonton Market square. From the hardware trade, Mr. Werner gravitated into business for himself, with an office and workshop on Main street.

"Paul," as his intimates call him, has represented numerous lines at various times, notably as an agent for the Pantocaster in Toronto, and also as agent for the noted rejuvenator Alpenkrauter. Among his other side lines have been that of interpreter, Commissioner for Oaths, agent for Norddeutscher Lloyd S.S. Co., etc.

Altho he may have severed his active business connections in town, it is quite probable we'll still see his cheerful countenance occasionally in the downtown section.

Moved to Edmonton.

Mr. Fred Geibel, the Bright Bank farmer who had an auction sale last week, on Saturday moved to his new layout in the Beverley district, where he had purchased a 40 acre plot. He is a short distance from the Beverley coal mines, and may include hauling with his farming operations. At the sale he realised fairly good prices for what was offered—young horses fetching as high as \$125 apiece, and the other animals also going at top prices.

Keep It Handy... Use It Freely

Inequitable Taxation

Cogent and powerful were the arguments recently advanced by Premier Angus Macdonald of Nova Scotia in support of his advocacy of centralization of taxation in the Dominion before the Rowell Commission on Dominion-Provincial relations in Halifax when he contended that this method of taxation would be "more equitable, efficient and productive."

The Nova Scotian premier's suggestion was made more particularly applicable to income tax, corporation taxes and inheritance taxes—the latter being better known in the west as succession duties, the intimation being to make these taxes national in scope with provision for the distribution of the proceeds among the provinces by a Federal grants commission "on a fiscal need basis."

On the score of greater equitability of division of taxation proceeds as between the provinces, Premier Macdonald's arguments were particularly pertinent when applied to succession duties, or inheritance taxes, declaring that in this respect the central provinces enjoy a preferred position. He backed up this statement by figures showing that in 1934 Ontario collected 56.1 per cent. of all succession duties collected in all provinces, while Quebec collected 24.4 per cent., making a total of 80.5 per cent. for these two provinces alone and leaving only 19.5 per cent. for the other seven provinces combined.

At Head Office

The reason for the large share of succession revenues absorbed by the Provinces of Ontario and Quebec is not far to seek when it is pointed out that as the law stands to-day succession duties on intangible property, such as stocks and bonds and mortgages, are payable to the government of the province in which the assets represented by the securities are located. In interpretation this is held to mean that the duties are payable to the province in which is located the head office of the corporation issuing the securities, since, with the exception of the banks, these companies refer to open offices for the transfer of stocks and bonds and similar instruments in the other provinces.

This situation has long been felt to be a discrimination against the maritime and western provinces, but in more recent years it has become aggravated with the collapse of realty values and the consequent transfer of considerable wealth to the intangible property form and the increasing issuance of securities for the development of natural resources.

But even worse than this, in the fact that the provinces in which the deceased was domiciled also regard it as their inalienable right to collect inheritance tax on intangible property, as a result of which beneficiaries are called upon to pay a double tax, one to the domiciliary provinces and another to the province of situs, to quote a legal term.

Futile Efforts

Some years ago efforts were made to provide for the passage of reciprocal agreements between any two or more provinces with the object of relieving estates from double taxation but so far little or no advantage has been taken of this proposal.

As far back as 1925 the inequity of succession duty taxation and the burden it is throwing upon estates, especially upon estates in the western provinces which are perforce usually very small, was pointed out by G. H. Barr, K.C., of Regina, in an interesting and informative address on the whole subject before the Bar Association of Canada in which he said: "There has been very little reciprocity among the Provinces and it is very unlikely that this provision (providing for mutual agreements) will ever become effective. It would appear to us that instead of each Province attempting to deal individually with each other Province, representatives of all Provinces should meet at a common table and devise some plan to which they will all be party and which will automatically take effect in all Provinces at the same time."

In an exhaustive, though compact treatise on the subject, the result of over a year of laborious study and research, Mr. Barr referred to a recommendation made earlier in that year by H. M. Fisher, a Winnipeg barrister in a brief to the Manitoba Tax Conference in which he suggested, among other things, the creation of an inter-provincial board with power to adjust equitably claims of multiple taxation as between provinces and provide for some Federal body to collect and distribute among the provinces entitled to the taxes so collected.

It should be possible," said Mr. Barr, commenting upon this suggestion, "to arrange some satisfactory basis for the division of this particular tax among the Provinces entitled to share in it. If it were stock in a company the tax might well be divided among the Provinces in which the enterprise is carried on on the basis of the annual business turnover in each Province, or some other arbitrary basis making for a reasonably just apportionment."

Home-made ICE CREAM
3 pints
for less than 20¢

Ingredients—one package Jell-O Ice Cream Powder, one quart half-and-half cream. Work—mix in bowl, put on window sill outside in cold weather, stir two or three times. The whole job will take two minutes of your time. And the ice cream! You'll be proud to say "I made it myself." Grocers sell Jell-O Ice Cream Powder.

JELL-O ICE CREAM POWDER

In Rural Areas

Lightning Causes More Havoc Than It Does In Cities

Nine-tenths of the property damage caused by lightning occurs in rural areas, it is reported in the first sections of the "Code for Protection Against Lightning," issued by the U.S. National Bureau of Standards, states Science Service. Four hundred people on an average are killed each year in the United States by electric bolts from the sky.

Proper use of lightning rods sharply cuts damage to buildings struck by lightning, it is asserted. Users of lightning rods are cautioned to see that they are properly connected to the ground. Placing lightning rods on small buildings in urban areas, particularly near large buildings, is uneconomical because of the protection afforded by the larger structures, it is stated. Large buildings should always be rodged.

Persons caught out in the open during an electric storm are advised to seek shelter in as large a building as possible. Failing that, they should head for the shelter of a cliff or a dense forest. The code was prepared under the joint sponsorship of the American Institute of Electrical Engineers and the National Bureau of Standards.

FROM GIRL TO WOMAN

GROWING girls are often sufferers from irregularities, headache, backache, nervousness, and other ailments. Dr. Pierce's Favorite Prescription is the only medicine that gives your daughter at such times, Mrs. Gladys Street, 1435 St. Catharines, Ont., said: "I felt terrible weak and nervous, hardly able to do anything and was underweight—I was miserable. Dr. Pierce's Favorite Prescription was the medicine that put me back in shape. After using it I gained several pounds, and I suppose to the fine appetite it gave me. I became much stronger and my nerves caused me very little trouble." Buy now the new size, 50¢. Liquid \$1.00 and \$1.50.

Australian Defence

Can Offer Security For British Fleet In Time Of Trouble

Any doubt about the necessity for preparing, while we have leisure, for the defence of British interests in the Pacific have now been cleared away.

In any preparations of this kind Australia must play a leading role. While Australia is ill-fitted even to defend herself against a strong raiding force, much less an invader, Australia is an embarrassment, not a source of strength, to British power in the Pacific.

On the other hand, an entirely new character will be given to the situation in the Pacific when Australia on the northern, eastern and western sides can offer security to a British fleet; when Australia is the base of a considerable and self-contained air force, and the home of an industrial organization capable of supplying munitions of war to a force which otherwise would have to depend on supplies carried halfway round the world, through seas possibly made dangerous by a European enemy.—Sydney Herald.

Gave Him An Idea

Bath Tub Helped Inventor Solve Oil Company's Problem

One of the difficulties against which mine engineers who bore for oil have to fight is the seeping into their wells of water through the pores of underground sand. Now a Texas company has invented a process which will prevent this.

The inventor received his brainwave when he emerged from his bath and noticed the formation of foam around the bath by the reaction of the soap to the salts in the water. Now they pump ordinary soap solution into oil wells, and this reacts with magnesium and calcium salts to form a tough curd which binds the pores and underground sands and makes the well water-tight. The process does not interfere with the oil flow.—Montreal Star.

America's first inter-colonial postal delivery of mail was made in January, 1872, between New York and Boston.

SUNDAY SCHOOL LESSON

FEBRUARY 20

CHOOSING COMPANIONS IN SERVICE

Golden text: For whosoever shall do the will of God, the same is my brother. Mark 3:35.

Lesson: Mark 3:7-13, 31-35.

Devotional reading: Isaiah 55:1-11.

Explanations And Comments
Increasing Popularity of Jesus, Mark 3:7-12. Jesus and his disciples withdrew to the Sea of Galilee where great crowds sought him, coming not only from Galilee but from Judea and even from Damascus and other sections east of the Jordan and from the region about Tyre and Sidon on the Phœnician sea-coast, all drawn to him by the fame of his deeds of healing and exorcism. So eager were the importunate people to touch him (for they believed that a touch would heal), that he was forced to escape from the shore in a boat.

The Setting Apart of Twelve as Companions in Service, Mark 3:13-19. The time had come for Jesus to have a definite body of intimate associates whom he could teach and prepare to carry on his mission. It was necessary where on the range of hills west of Capernaum and the lake side, that Jesus gathered together the men whom he had chosen, "that they might be with him, and that he might send them forth to preach, and to have authority to cast out demons." "Ye did not choose me, but I chose you," Jesus told them in that last discourse with them (John 15:16), "and appointed you, that ye should go and bear much fruit, and that your fruit should abide."

The Friendship that Eclipse All Others, Mark 3:31-35. There came his mother and his brethren and, standing without, they sent unto him, calling him. When Jesus was told of the crowd around him that his mother and his brethren were without seeking him, he replied, "Who is my mother and my brethren?" Then looking about upon those that sat around him, he declared his kinfolk were those who did his Father's will.

It's a grand and glorious feeling when you open the dictionary to the exact page on which is the word you don't know how to spell.

Every Newgar girl of India is compelled to be "married" to a bel fruit so that she will never be left a widow.

Lemon juice in water cauliflower is cooked in makes it snowy white.

I WAS NEVER SO EMBARRASSED

-FOR I KNEW THAT ACID-INDIGESTION WAS DISTRESSING TO ME AND OFFENSIVE TO OTHERS BUT NOW—I JUST ALKALIZE THE EASY PHILLIPS' WAY

The quick way to alkalize is this: Take two teaspoons of Phillips' Milk of Magnesia 30 minutes after eating and drinking. Or, when you feel the new Phillips' Tablets that come in a small flat tin you carry in purse or vest pocket—You do it unnoticed. Relief is almost immediate. "Gas," nausea, acid breath and other offensive symptoms leave. That "stuffed" feeling and pains from "acid indigestion" cease to annoy. You feel great.

This is the way, we believe, more doctors use than any other when alkalizing upset stomach.

The League of Nations health survey shows that before the World War men reached their full stature at the age of 25; since the war at 20. Why, nobody knows.

Through observations of the moons of Jupiter, it was learned that the passage of light through space is not instantaneous. —2242

A "strong" flour that goes farther

PURITY FLOUR
Best for all your Baking

PF197

And Far Handier Than Older Ways!!!

Here is the most useful waxed tissue package you've ever seen.

This new pack contains 45 sheets of silver white waxed tissue. Through the top of the pack is a metal eyelet for hanging on the wall. Inside, the tissue is held in an ingenious grip so that you can withdraw one sheet at a time by simply reaching out with one hand.

"Presto-Pack" thus becomes the handiest of all kitchen aids. You will wonder how you ever managed without it.

Evidence Would Indicate That Great Britain Will Be Ready Should War Come

Evidence continues to accumulate that Great Britain, while in no sense seeking war, is certainly rushing her way to effective preparedness should war come. The new fortifications at Cyprus; the strengthening of the air base at Alexandria and of the protection of the Suez Canal; the notable additions to the air force at Singapore and the establishment there of the most powerful mobile heavy gun batteries in the world today, so far as is known; the plan—officially confirmed in London cables—to establish a strong naval and air base at the port of Freetown in the West African colony of Sierra Leone; the huge undertaking at Capetown, in the cost of which Britain is sharing; and the additional warships over and above those already planned, envisaged in the speech of Sir Thomas Inskip a little while ago—these are some of the concrete proofs that the British Government is not only alert to the critical nature of the general international situation but has no intention of being caught napping by any other Power anywhere at any time.

Rumors continue to keep the cables busy. The latest credits Mussolini with having indicated that there would be big things doing in March in connection with which he is reported to have referred to the alleged superiority of the Italian Fleet in the Mediterranean over British naval power. But it is quite on the cards that Mussolini will be reckoning without his host. Already a realignment of British sea-power has resulted in the shifting of some of Britain's newest rebuilt battleships into the Mediterranean, and it is reported on good authority that there are more to follow. The whole point of it is that Britain is the only Power which has been reconstructing upon a gigantic scale and that most of this work of reconstruction is now complete or will be within a very short time. These new reconstructed battleships and cruisers are much more modern and much more powerful than those still in commission but not yet outmoded.

Now comes news from London that within one year Britain counts upon possessing a fleet of ten thousand military airplanes—which would give her an air force more than equal to those of Germany, Italy and Japan, on the basis of the latest available estimates. Already Britain has 1,560 first-line airplanes, which is only 190 short of the number she should have to-day under the rearmament programme. Work is being speeded up so rapidly that behind this first line she has a force the real strength of which has never been made public. Now this strength, it is said, will be six reserve planes for each first-line plane within a year; and as the reserves are just the same planes as the first line, that would give Britain a total air force of 12,250 planes within the twelvemonth.

Consider these facts in addition to the recent army commands shake-up, the complete mechanization of the army, and the plans for improving enlistment in all three forces—plans which are having distinctly encouraging results—and it is not difficult to perceive that Britain is thoroughly aroused and is moving with all possible speed to be in an assured position to meet any attacks that may be made.—Montreal Star.

Fish Eat Water Fleas

Supply Sent Daily To Buckingham Palace For Aquarium

Fleas go to Buckingham Palace every day but they don't bite anyone. They are specially bred food for fish in the royal aquarium.

A tropical fish expert drives into the palace courtyard with a small black bag containing a supply of water fleas. For easier handling they are semi-frozen on gauze trays.

When dropped into the water, they come to life and give the fish some exercise—if not snapped up first.

"Come in, George," said the Master of the house. "He won't touch you. You know a barking dog never bites." "Yes, I know that," came the reply, "but does the dog know it?"

For The Woman Investor

Some Hints Which Should Be Very Carefully Followed

Statistics show that much of the capital of the world is held by women, who have inherited it from fathers or husbands. To invest this wisely, that it will not be lost and will bring in a steady income, is very difficult for the woman who has been shielded by her gallant males from financial worries, as well as from the knowledge and experience which she sorely needs later.

One of the first financial axioms is: "Don't carry all your eggs in one basket." Diversify your investments, putting some of the money into real estate, some into endowment insurance, stocks which you have reason to believe certain, state and city bonds, and high grade public utilities. Thus you distribute your risk. You are not likely to lose along all lines, even if one should "go bad."

Diversify of investments is not enough. Each investment should be carefully studied and found secure, invest in growing industries, not in things which may soon be out of date, as carriages or chums.

Do not buy on too narrow a margin. If you own only a small percentage of a bond, you may have to sell when hard times come and so will lose money on the deal. If you own the entire bond, or most of it, you can hold it until it returns to face value and have lost nothing. It is risky to invest money in foreign countries, since a war or changed laws may make your holding worthless.

Before you sign away any of your money or your rights, or make a contract, read over every word of the agreement carefully and be sure that you understand what it means. It is even wise to consult a reliable lawyer about the advisability of such a move. Have everything down "in black and white," as that is good business sense.

Appreciated in India

Air-Conditioned Train Will Make Travelling More Enjoyable

Train travel in India is notoriously unpleasant. The winter conditions on our railways have to contend as reversed as India gets excessive heat. But another indication of new India is the fact that the first air-conditioned train recently made a demonstration run from Delhi to Agra and back. Four coaches were used for the journey which was a revelation to those on board of modern methods of travel and comfort for passengers in that hot country. The air-conditioning equipment makes it possible to maintain a steady temperature inside the carriages, the air being renewed every four minutes. Each coach accommodates fourteen first class passengers, being divided into five two-berth compartments and one-four-berth compartment. It is proposed to attach an air-conditioned coach to each mail train between Howrah and Bombay via Calcutta—Brandon Sun.

Just What He Said

Dealer Played Safe In Recommending Horse To Purchaser

The deal was just being brought to a close.

"He appears to be the kind of horse I want," said the purchaser. "Yes, he is a fine-looking horse," the vendor answered.

"And he's a good worker?" "When you see 'im at work you will be delighted with 'im."

The horse changed owners. A week later a heated argument was being waged between the same two men.

"And you had the—cheek to tell me he was a good worker? Why, 'e couldn't pull a hen off its nest!" "I never told you nothing of the sort. Wot I said was—when you see 'im at work you'll be delighted with 'im—ar so you will!"

Having found on the doorstep of the universe a star almost as big as our solar system, Yerkes observatory astronomers plan to leave it there.

Empire's First Tapioca Plant

Will Be Erected In Honduras On Site Called Canada Hill

A. Reg. Timms, contractor of Watland, Ont., has left for British Honduras to supervise and act in a consulting capacity in connection with the erection of building and installation of machinery for what will be the only factory in the British Empire manufacturing commercial tapioca starch from the cassava root. The site of the pioneer factory has been named "Canada Hill."

The development of this industry had its origin two years ago. At that time two young men, George Patterson of Toronto and Bill Murray of Montreal, conceived the idea that somewhere in the British Empire there was a location suitable for the production of cassava roots and determined to find that location.

Three followed months of investigation of possibilities throughout the Empire and they found a hidden valley in British Honduras where the cassava tree could not only be grown profitably but where the production of starch per acre was as high and higher than the East Indies. The organization of Empire Starch Products, Limited, and the support of the British Colonial Office and the Agricultural Board of British Honduras followed.

The Government of Honduras agreed to construct wharves, docks and a 26-mile road from the sea coast to the valley, on the condition that the company produce a satisfactory financial set-up.

The British Government has voted \$25,000 toward provision of a suitable port and the construction of the road which follows for a great part of the way an abandoned narrow-gauge railway bed which had been used for taking out teak-wood and other hard woods from the interior.

Process Is Complicated

Laboratory Workers Find Lipstick Is Hard To Make

Have you any idea of the complicated processes that go to make beauty preparations?

Lipstick, for instance, of which a large factory can turn out several hundredweight a week.

Lipstick is temperamental stuff to make, laboratories will tell you. It may be blended to the exact formula and heated for the right time at the right temperature, and then it will come out very slightly different in color or consistency—and there is nothing to do but throw it away and start again.

When the mixture is just as they want it, they pour it into a metal mould with perhaps twenty holes. The mould unscrews into halves, leaving 20 lipstick sticks. It's a slow, delicate business, and the dyes, in powder form, have to be indelible and will stick to anyone working on them.—Overland Daily Mail.

"Hailstones in a summer storm recently killed two hundred sheep at Wolwerusert, South Africa.

In Burma, tattooing is regarded as a fine art.

Crochet Works Magic With String

Household Arts by Alice Brooks

Crochet Then Join Medallions for Cloth Scarf or Pillow Top

PATTERN 6039

Your hook acts like a magic wand as you crochet these exquisite medallions in rings. They count up so quickly, you'll have enough to sew together for a beautiful spread, cloth, scarf or pillow before you know it. They measure 7 1/2 and 2 1/2 inches in string—smaller in finer cotton. In pattern 6039 you will find complete instructions for making the medallions shown; an illustration of them sewn; a photograph of the finished medallions; material requirements.

To obtain this pattern send 20 cents in coins (stamp cannot be accepted) to Household Arts Dept., Winnipeg Newspaper Union, 115 McDermott Ave. E., Winnipeg.

There is no Alice Brooks pattern book published

Knowledge of Buttermaking Gained From Research Work Presented to Association

Under the title of "Newer Knowledge of Buttermaking," Dr. E. G. Hood, Chief, Division of Dairy Research, Dominion Department of Agriculture, presented an important paper at the convention of the Manitoba Dairyman's Association. All the high points in butter research throughout the world for the past five years, summarized from the results of investigational work carried out in the main butter producing countries, were dealt with in the paper, including contributions from dairy research institutions in New Zealand, Australia, United States, South Africa, Germany, Denmark, Ireland, Great Britain, Sweden, and Canada.

For the purpose of presentation, the subjects under review were arranged under the following sub-heads: Neutralization; Workmanship; Wash Water; Packing; Storage; Keeping Quality; Defects; Standardization of Composition; and Laboratory Control. The main object in presenting a subject of this character, stated Dr. Hood, was to give some insight into a few of the major problems under consideration in the main butter producing countries of the world and point them out to buttermakers who have not the time nor access to the dairy literature. In addition to that, it seemed desirable to stress upon the practical man the importance of the scientific side of buttermaking, and that effort and expense have not been spared by the scientist in solving problems connected with the practical work of the dairymen of Canada. While it was generally recognized that good butter could be made even with the knowledge of to-day, many of the why's and wherefore's still remained mysterious and without logical explanations on a scientific basis. It was also apparent, continued Dr. Hood, that if progress were to continue and improvements in quality and method be made in buttermaking, as in other fields of industry, experimentation must continue, and the findings of such work must eventually be applied to every day practices.

Under the sub-heading of workmanship, recommendations were made in the manufacture of winter butter from buttermilk with a low iodine number, and also in the manufacture of summer butter. In the case of the latter, the recommendations are three in number, namely: (1) since the body of summer butter is normally soft, a relatively high wash water temperature should be used. Though wash water with a temperature as high as 60 degrees F. will increase the firmness of butter, wash water of this warmth will reduce the standing-up properties of the butter. It is probable that the optimum temperature of the wash water will be about 50 degrees F. (2) The cream should be cooled to, and held at, as low a temperature as is practical. Cooling the cream to a low temperature will increase the firmness of the butter, increase its standing-up properties. (3) The cream should be churned at as low a temperature as is practical. The lower the churning temperature, the firmer the butter.

With regard to packing, liners and boxes, best standard boxes have been incurred by butter manufacturers in many countries by wood, metal, surface flavors, and high colour. To overcome these difficulties, much attention has been given to this subject, particularly in New Zealand, Australia and Canada. Experiments recently conducted by the Dairy Research Institute of New Zealand show that great benefits can be secured from the use of a new butter-wrapping material, triple foil parchment, which is a sheet of aluminum foil, sandwiched between two sheets of parchment paper. Results of New Zealand experiment have been paralleled in Australia. On the basis of the findings of these two countries, it appears as if this new type of butter wrap will eventually allow countries far distant from England to land their butter into store there in the same condition as the freshly made butter forwarded more quickly from the close continental countries. Experiments in Canada conducted by Hood and White with the triple aluminum foil wrap further confirm the results obtained in New Zealand and Australia. The casing-formaldehyde spray method of Wiley for the treatment of butter boxes to overcome wood taint has met with considerable success in Australia. An adaptation of the method has been made by Hood and White to Canadian butter box manufacture. While its use has been limited to Western Canada, marked improvements have been found in the surface quality of the butter as compared with the older method of packing.

Numerous other papers are to be found in the literature on the wrapping of butter. These include studies on the chemical and mechanical properties of parchment paper, mould resistant, methods of sterilization, specially treated papers to exclude certain light rays, and the influence of the wrapper on the autoxidation of butter fat.

In summarizing the activities of the main butter producing countries of the world, concludes Dr. Hood, there appears to be ample evidence to show that the industry is progressively advancing, but as yet many problems remain unsolved. More research is needed in the procurement of high quality cream, further scientific knowledge is needed on butter, relative to its structure, microbiology, and chemical composition, as well as its nutritional aspects, before the fullest benefits can be derived by the industry.

Exercised Their Rights

Grenadier Guards Marched Through London With Bayonets Fixed

The steamship Dunera arrived at Southampton recently with the Second Battalion, Grenadier Guards, from Egypt, and the First Battalion, the Duke of Wellington's Regiment, from Malta.

The Second Battalion, Grenadier Guards, exercised its ancient right of marching through the City of London with bayonets fixed, drums beating, and Colours flying. In accordance with custom the City Marshal (Commander J. B. Poland) challenged the battalion at the city boundary, and on the commanding officer replying, "The Second Battalion, Grenadier Guards," exercising their ancient privilege and right to enter the City of London with Colours flying, drums beating and bayonets fixed," the Marshal replied: "I have it on the authority of the Lord Mayor, to receive a hearty welcome to your regiment through the city."

The City Marshal escorted the battalion through the city, and the Lord Mayor took the salute from the balcony of the Mansion House.—London Times.

SEES RETURN OF GOOD CROPS WITH NORMAL RAINFALL

Ottawa.—The only thing wrong with Saskatchewan drought area was lack of rain, said Dr. Thomas Donnelly (Lib., Wood Mountain) during the throne speech debate in the House of Commons. He protested against statements made in different circles to the effect conditions in the dry sections of the prairies were due to farming methods.

The drought area was not confined to Canada. It spread over many states of the American union and extended into Mexico. Last year the area was restricted on the edges as compared with previous years, but the drought in the centre of the area became more intense than ever before. There was practically no growth at all.

Dr. Donnelly said all signs pointed to a further restriction of the area next year. It appeared the country was gradually coming back to conditions of normal rainfall and normal production.

Most of the farmers in the drought area had settled there with no worldly goods, he explained. Over a period of 20 years they had enjoyed reasonably good crops and many of them had built up a fortune of \$10,000 to \$20,000. It was impossible to ask those men, now 40 to 65 years old, to leave their homes and the land they know would produce crops if rain came and carve out new homes for themselves elsewhere. They would not do it.

"I would like to say this to the government," he said. "It is justified in helping the old settlers remain on the land, but it is not justified in helping young men settle or start farming there. Young men should be encouraged to go elsewhere and start farming where prospects are better."

Dr. Donnelly said the old settlers had faith in the land and he shared it. There would be rains there again and there would be good crops again.

Stock died in Saskatchewan last fall and early winter because feed was not shipped to the drought area soon enough, it was charged by E. E. Perley (Cons., Qu'Appelle). He blamed the federal government.

In some sections of Saskatchewan 30 per cent. of the horses were reported dead or dying from starvation early in January, Mr. Perley said. Some farmers charged the Saskatchewan government with deliberately stalling in feed payments to save interest, he said.

Mr. Perley favored a control board for the western wheat industry. There were control boards for railways, radio, power and various other industries and he could see no objection to a grain control board.

German Army Shakeup

Reports Say Three Generals Have Offered Their Resignations

Berlin.—Diplomatic quarters heard reports three generals offered their resignations in protest against Nazification of the German army and wondered whether there are many discontented higher officials.

Observers familiar with Chancellor Hitler's tactics said all necessary precautions against army opposition naturally were taken before the Chancellor embarked on his drastic shakeup of the army high command and the foreign office.

Meanwhile, Nazi party headquarters, with Heinrich Himmler, chief of all German police as the prime mover, was said to be preparing an order for "Nazification" of the army.

It was reported the order would eliminate chaplains from the army, make the Nazi salute obligatory, confine recruiting of future young officers to men who attended Nazi party institutions of learning; and place a political commission on each army staff.

Slot Machines Barred

North Bay, Ont.—City council has decided to instruct the police commission to have all slot machines removed from North Bay by March 1. License fees for the machines brought \$1,000 to the city treasury last year but council decided to forego the money to rid the city of what it termed an undesirable gambling nuisance.

Decide On New Course

Plan Would Withdraw Foreign Volunteers From Spain

London.—Foreign Secretary Eden was believed to have decided on a new course to obtain withdrawal of foreign volunteers in Spain and approach more cordial relationship with Italy in one diplomatic sweep.

It was reported the foreign secretary would shelve discussion of Spanish belligerency rights temporarily to make progress on other angles of the problem.

Britain and France, diplomatic quarters said, now aim to convince Premier Mussolini a government victory would not mean Bolshevism in Spain. The argument is that Spanish Communists are not likely to control the Socialist administration of Dr. Juan Negrin.

Thus, these quarters stated, Mussolini will have an opportunity to withdraw his blackshirts and yet let the Italian people he fulfilled his aim in saving Spain from Bolshevism.

Alfred Duff Cooper, first lord of the admiralty, told commons the government's latest measures taken to counteract the renewed outbreak of piratical attacks on British shipping in the Mediterranean will have the desired effect.

Anarchy In China

Banditry Causing A Lot Of Trouble For Japanese Army

Shanghai.—A grave state of anarchy and lawlessness was reported straining authority of Japanese in north China while their armies struggled to conquer a vast area of central China along the Lungshai railroad.

Detachments from Tientsin said that after the Japanese evicted Chinese officials in captured north China provinces, these areas relapsed into banditry and civic disorder.

It was reported conditions had become intolerable for peasants who did not flee from their homes during the Japanese invasion and that marauding bands were preying on the countryside.

Japanese authorities in Tientsin charged Communist agents were active in stirring up the people to unprecedented anarchy.

Japanese troops were said to be mopping up bandits and alleged Communist guerrilla bands between Tientsin and Pekingfu. Authorities have tried to persuade them to surrender and, according to Chinese reports, 100,000 of them agreed to do so.

Reports said 80,000 others, mostly former Chinese militia, homeless peasants and professional bandits, were holding out. Chinese and Japanese authorities offered rewards for firearms and the heads of alleged outlaw leaders.

French Are Pleased

Say Coming Visit Of British Sovereign Omen Of Peace

Paris.—In a chorus of praise for Great Britain, its royal family and the bands of friendship that extends across the English Channel, the French press heralded the coming visit of King George VI and Queen Elizabeth as an omen of peace and strength.

The state visit is set for late June, when King George will dedicate the Australian war memorial at Villers-Bretonneux and be the guest of President Albert Lebrun in Paris.

A sidelight was the possibility of a meeting in France between George VI and his elder brother, the Duke of Windsor. One newspaper suggested the brothers "in order to avoid the curious, may meet secretly outside the capital."

British Aircraft

Heavy Machine-Guns Of American Design Are Being Installed

London.—Sir Thomas Inskip, minister for defence co-ordination, told the House of Commons a heavy machine gun of American design is being installed in British aircraft under the replacement program and an interim order for such guns has been placed in the United States.

Sir Thomas declared arrangements had been made for the production of such heavy machine guns in British factories but it had been found impossible to meet the requirements of the stepped-up program. Production, however, was now proceeding satisfactorily in British factories. 2242

NEW PUBLISHER

A new photograph of Mr. J. W. McConnell, who succeeds the late Lord Atholstan as owner and publisher of the Montreal Star.

Taking Important Part

U.S. Volunteer Pilots Said To Be Aiding China

Hankow, China.—Chinese sources asserted United States volunteer pilots were taking important parts in China's attempts to rebuild her air defenses against Japanese invasion.

This disclosure came as Japanese bombing squadrons, apparently in retaliation for a Chinese air attack in which Americans were said to have taken part, raided Hankow, temporary capital of China. One Japanese raider was down.

Chinese military despatches said the "foreign legion" played an important role in operations along the Hwai river, northeast of Hankow, now China's major battlefield. There pilots flying high-speed bombers made in the United States were said to have blasted so effectively at Japanese artillery positions and troop concentrations that Chinese infantry for the first time in the seven-month-old war was able to advance with support of its own air force.

Dakota Farmers Need Loan

Willing To Try Again For Crop If Seed Purchased

Crosby, N.D.—Farmers of a drought-ridden five county area in northwest North Dakota would gamble their labor against the elements again this year, if the government provided a state of close to \$2,000,000 for seed and protection loans.

C. H. Lockrem, district supervisor for the Farm Security Administration, estimated at least four out of five farmers in the area would need loans of \$300 each to purchase seed, tractor fuel or feed for horses.

"If moisture comes and the pests don't get us, we'll make a crop," the farmers say.

\$125,000 GIFT TO SEND SCHOOLBOYS TO CANADA

With Earl Baldwin as its patron, a \$125,000 trust has been established by a Bradford, England, business man, to give fifty schoolboys a month's visit to Canada every year for ten years. The donor, Mr. Walter Rhodes, is seen above signing the trust at Grosvenor House, London, watched by some of the Trustees. Mr. Rhodes brought Bradford boys to Canada last year as a Coronation gift.

Invitation Accepted

King George And Queen Elizabeth To Visit France This Summer

London.—The king and queen will visit France for four days this summer, marking the first state visit by Their Majesties to a foreign country since their accession.

"The king and queen have accepted with much pleasure an invitation from the president of the French republic to pay a state visit to Paris from July 28 to July 1. During his stay the king will unveil the Australian national war memorial at Villers-Bretonneux."

In making the unveiling the king will be following the example of his brother, the Duke of Windsor, who as King Edward VIII. went to France to unveil the Canadian memorial at Vimy Ridge on July 26, 1936.

As the Duke and Duchess of York the king and queen twice visited Paris—in July, 1931, for the Colonial exposition, and again in November, 1935, on the occasion of the annual dinner given by the Caledonian Society of France. Both speak fluent French.

Fighting Ice And Storms

Soviet Plans For Rescue Of Scientists Being Rushed

Moscow.—A delightful disaster costing 13 lives accumulated hazards of the Arctic as Soviet rescuers battled ice and storms in a struggle to aid four scientists imperilled on a drifting ice floe.

Undeterred by the crash of the semi-rigid V6 on a test flight while preparing to aid the stranded scientists from the air, the Soviet government pushed forward with plans for aeroplane relief if ice breakers cannot reach them in time.

Main hope of saving the scientists before the floe might be crushed in the ice fields on the Greenland sea lay in the four ice breakers of the rescue expedition. These ships carry eight specially-equipped planes.

French Flying Boat Wrecked

Eight Persons Killed When Airliner Crashed Into Breakwater

Marseille, France.—Eight persons were killed and four injured in the crash of an Air France flying boat against the Marseille breakwater at the takeoff. The trans-Mediterranean airliner was starting its scheduled flight to Corsica, on the Marseille-Tunis run. It hurtled against the breakwater at 60 miles an hour and burst into flames.

Air France announced the dead were five passengers and three of the crew. Two passengers and two of the crew were injured. All the dead were French. Officials thought pilot probably failed to see the breakwater through morning fog and mist.

PLANS FOR CHEAP LOW COST HOMES ARE ANNOUNCED

Ottawa.—This year's crop of new, low-cost homes will probably feature conventional lines as a result of the Dominion Housing Act minimum cost house competition in which the winners were announced. None of the modernistic, flat-roofed types were chosen.

From 300 designs entered by architects in every province the judges selected 10 which will be completed with full working plans to be made available at a cost to meet the burden of even the most humble builder.

Winners in the contest will receive \$250 each when the plans are completed and turned over to the government, and the plans will then be sold to prospective builders at \$10 each.

The designs were for houses to cost not more than \$2,500 in British Columbia or \$3,000 elsewhere in Canada, insulated, containing three bedrooms, living-room, dining-space, kitchen, bath and basement. Winners in the contests were architects and firms in Quebec, Ontario and British Columbia.

Gable roofs predominated in the designs chosen, with some mansard and "hip" roofed models, and extreme simplicity was the keynote of all. Materials to be used were left to the option of the builder.

In some instances provision was made for one bedroom on the ground floor with the dining room or alcove combined either with living room or kitchen. Only one or two plans provided verandas or porches.

The finished plans will be available to any person wishing to buy, whether it is proposed to build under the Housing Act or otherwise.

Following are the winners: Forsey, Page and Steele; Greinshide and Langley (two designs); Douglas E. Kirkland, all of Toronto; Paul Rousseau and A. H. Tremblay, Quebec; Edward Cecil Cox and T. H. Mace, Montreal; Alvin Ronald Prack, Hamilton, Ont.; and Harold Culverne, Vancouver.

Would Increase Navy

France Would Build Two More Battleships To Compete With Italy

Paris.—Plans to seek construction of two 35,000-ton battleships to meet Italy's announcement of new construction were revealed by Navy Minister William Bertrand.

Bertrand's announcement to the chamber of deputies' navy committee was made after his superior, Defence Minister Edouard Daladier, declared French war industries must be further co-ordinated before any extensive expansion program can be undertaken.

Bertrand told the navy committee he planned to ask authorization for construction of two 35,000-ton battleships above the scheduled 1938 building program. Unless steps were taken, he said, the Italian fleet would be superior in new tonnage in 1942.

The committee adopted a resolution requesting Daladier to give detailed clarification regarding naval construction.

Britain's Food Supply

Says Suggestions For Storing Two Years' Supply Is Fantastic

London.—Sir Thomas Inskip, minister for co-ordination of defence, declared Labor suggestions for storing two years' food supply for use in case of emergency were fantastic.

He said the government should pre-emptively, secretly if possible, make purchases of food supplies according to the needs of the situation. It was undesirable, he argued, to put large quantities of foodstuffs into ports liable to attack.

"Ton for ton, and ship for ship, we are substantially in as good a position to-day as in 1914," Sir Thomas told the house in opposing a Labor resolution criticising the minister for having done nothing to relieve the country's anxiety in regard to food supplies.

The house defeated 195 to 130 the Labor proposal that large stocks of food be stored in the country.

WHEN COLDS BRING

SORE
THROATRelieves
THROAT
PAIN
RAWNESSEnters Body
Through
Stomach and
Intestines to
Ease Pain

The speed with which "Aspirin" tablets act in relieving the distressing symptoms of colds and accompanying sore throat is utterly amazing, and the treatment is simple and pleasant. This is all you do. Crush and dissolve three "Aspirin" tablets in one-third glass of water. Then gargle with this mixture twice, holding your head well back.

The medicinal gargle will act almost like a local anesthetic on the sore, irritated membrane of your throat. Pain eases promptly; rawness is relieved.

• "Aspirin" tablets are made in Canada. "Aspirin" is the registered trademark of the Bayer Company, Limited, of Windsor, Ontario. Look for the name Bayer in the form of a cross on every tablet.

CHAPTER V.—Continued

"Please show Mr. Punder out." Punder stood there, looking more bull-like than ever.

"Do you want to be shown out, or thrown out?" said Ernest. "I give you ten seconds to decide which."

He pulled out his dollar watch. "I'll go," said Punder. "But, mark my words, I'll be back. Ha! ha!"

He jammed his silk hat on his head and strode out of the room, sizzling. When he had gone the earl said, "I didn't take to him very much, did you?"

"Father," said Rosa, "I'm frightened."

"But why, my dear? The bogymen have gone. And did young Ernest hear the lion? I'll say he did. Nice lion-hearing, Ernest, my boy."

"But, father," said Rosa, "you don't know Punder."

"We've met."

"You don't realize what a spiteful, ruthless, unscrupulous man he is," she said. "I've heard stories about him. Getting his own way is an obsession with him. Now we've got his back up, and a Punder never forgets."

When he says he'll be back, he means he'll be back; and, in spite of what our family crest reads, are we really prepared to fight a powerful brute like Punder?"

"Oh, he was bluffing," said the earl.

"No, he wasn't," said Rosa. "He'll be back."

"Let him come," said the earl. "I forgot to ask him how the ducks they pack stuffed olives in bottles so that all their little red noses press against the glass."

"We've made a cruel enemy," Rosa said.

"And I'm afraid I'm to blame," said Ernest, who, having discharged his blast of temper, felt a bit empty and apprehensive.

"Nonsense," said the earl. "You made a sporting gesture. I was afraid for a moment you were going through with it."

"So was I," said Rosa.

"But will he do anything, do you think, sir?" asked Ernest.

"He may. Tell us with pickles, or something like that," said the earl, unperturbed. "But we should worry, what? Are we Bingleys or are we bobolinks?"

CHAPTER VI.

If, for the thing seemed more than possible, Ernest Bingley had awakened to find himself not in a benevolent bed in a castle in Somersetshire but in his room, open to the air in Iowa studio, surrounded by odds and ends of owls and others, it would have been a disappointment, but hardly a surprise.

For five incredible days he had been master of the denizens (at a price); but the castle and those who dwelled therein still had a mirage-like quality for him. Momentarily he expected Lady Rosa to turn into a white dove before his bewitched eyes, and fly away. He kept stealing secret glances at the earl to detect signs that that nobleman was becoming a kobold after the protean fashion of the chameleon characters that populate the dream-world.

At intervals Ernest inflicted on his own person a rather painful pinch, an act which did not go unnoticed by Crump, or undiscussed in the servants' hall.

"Inches himself, does he?" commented Mrs. Featherby, as she went about her culinary chores. "Well, that's his privilege. He can pinch himself till he's all over black spots like a leopard, so long as he does not try to pinch me."

"Nevertheless, and notwithstanding," said Crump, "I consider such conduct unbecoming in a millionaire, if such he be, which I still beg leave to doubt. If you could see his undergarments, Mrs. Featherby."

"Mr. Crump! Please! You forget yourself!"

"So very sorry, Mrs. Featherby. I wish I could forget myself."

He released an outsize sigh. "I know what you're going through," said the cook. "But we must bear our crosses, as I remarked when the late Mr. F. passed to his reward."

"Let's not talk of my loss now," said Crump. "If you don't mind. The past is past. It's the future that worries me now. Did you know that, I am psychic?"

"Are you really, Mr. Crump? The late Mr. F. saw things, but that was after a spell of drinking."

"I," said Crump, "am not a drinking man. And I do not see things. I have premonitions."

"Dear me, how dreadful," said Mrs. Featherby. "A nice cup of tea now—"

"Thank you. But even tea, Mrs. Featherby, will not quiet my fears. I suspect dirty work at the crossroads, and dirtier to come. And I hate to see the family put upon."

"Be do I, and them so kind and all," said the cook. "Is he planning to

murder them in their beds do you think?"

"What I'm afraid of," said Crump, glumly, "is that the day is not far off when they'll have no beds to be murdered in."

"Then you think he is up to some jiggery-pokery?"

"Downright tiddly-boddy," Mrs. Featherby, said Crump.

"Of what sort?"

"Ah!" said Crump. "That remains to be seen."

"It's plain he's a bit potty," Mrs. Featherby said. "But he does not seem like a wrong 'un. I've always found him civil-spoken and quiet. I must say."

"Ah!" said Crump, and packed a word of meaning into the sound. "These quiet ones! The lion stalking its prey is quiet enough. Mrs. Featherby, or so I am informed. But if you'd seen what I saw—"

"What did you see, Mr. Crump?"

"The real lion," said Crump, darkly.

"When? Where?"

"It was the day that Punder person was here," he answered. "Our millionaire, granting for the sake of argument he is one, showed his claws and teeth. But I can tell you, Mrs. Featherby, or so I am informed. But if you'd seen what I saw—"

than old Frostyphie the Kneekle-cracker.

"My dear Mrs. Featherby," said Crump, "you have been in service here too short a time to speak in so flippant a fashion of a member of one of our oldest county families."

"But that's what all the servants call him," she said. "And, besides, it is just between you and me, Cecil."

She accompanied her first use of his first name with so coquettish a look that Crump, hardened bachelor that he was, went shrim-pink. She followed up her advantage.

"You don't like him yourself, Cecil. Own up."

Crump set down his tea-cup.

"My like or dislike of Captain Duff-Cooper is, to him, I daresay, a matter of complete indifference," Crump said. "As a gentleman and a guest in this house he is entitled to receive and does receive from me my best and most respectful service."

But," he added, suddenly dropping his drawing-room tone, "between you and me and that rolling-pin, my dear Sylvia, I detect the big bluster."

"Another cup of tea, Cecil?"

"Thank you so much, Sylvia, but I must decline. Duty calls. But we must have another little chat in the not too distant future."

"The pleasure will be mutual, Cecil," she said.

"Till then, Sylvia," said Crump, and, with a languishing look, he left her.

"Crump's tour of inspection to see if the dusting had been done diligently took him to the library. At first he did not notice Ernest, sunk in a sofa and crouched behind a dense book, a history of the part played by sundry stalwart Bingleys in the Wars of the Roses, one of the few tomes about the exploits of his clan with which he was not familiar."

Ernest saw Crump first, saw a look of indigo woe on a visage which was, usually, as expressionless as a trout.

"Beg pardon, sir," said Crump. "I was not aware you were here. I thought you were in the potting-shed with his lordship."

"I was there," said Ernest, emerging from the middle age. "But I'm not there now. I'm here."

He was never at his best with Crump. The latter was invariably polite and obliging, but he had a way of looking askance at Ernest which was most disconcerting. Ernest, by nature as sensitive as a sun-burned post, suspected that that Crump suspected him of skulduggery.

Recalls Old Experience

Sir William Mulock Tells Story To Bank Shareholders

Sir William Mulock once drove in a "rickety, old two-horse cab" containing nearly a quarter of a ton of gold through the streets of Toronto.

The former chief justice of the Supreme Court of Ontario told of his experience at the annual shareholders' meeting of the Dominion Bank, of which he was the first legal adviser.

At the first meeting of shareholders in 1871, Sir William was appointed secretary, and later, solicitor for the bank.

"I have had some connection with this bank, extending over nearly two-thirds of a century," said the speaker. "The shares, or most of them, which I took when the bank opened, I still have."

When the bank was founded the law stated that no bank could issue its own bills until it had \$100,000 in gold actually in its treasury, Sir William recalled.

"That time arrived," he continued "but in the meantime the bank had temporarily deposited at interest its capital not required for its daily business with another bank. The manager, Mr. Bethune, asked me to go down to the bank with him to draw out that \$100,000 and put it in our own treasury so that the bank might issue its own notes."

"So we went down to the other bank in a two-horse cab, a rickety old cab, and I was to stay in it while he went in and brought out the gold," Sir William recounted. "They brought out so many bags that we feared the floor would give way before we got over to our own banks—the roads were bad and rough."

"At all events, the gold weighed nearly a quarter of a ton. But we carried it safely and deposited it. Later on, some little time afterwards, an issue of bank notes came out. I bought the first two—two \$4 bills—and presented them to the bank as a memorial."

DRESSED POULTRY.**

**CATTLE AND HOGS BOUGHT EVERY DAY IN
THE WEEK.—HIGHEST PRICES PAID.
PHONE SEVEN, STONY PLAIN.**

Mrs. Fisher Suggests, for Dinner:

Canadian Fish Loaf: Take 2 cups Canadian fish, "left-overs" if desired, or a pound tin of cadned tin, flake the fish, and add 2 cups fine soft bread crumbs, 2 beaten eggs, 3-4ths cup of milk, salt and pepper to taste, tablespoon onion juice, 1 teaspoon lemon juice. After mixing the ingredients well, place in greased pan, dot with butter and bake in moderate oven 45 mins or until loaf is firm and browned. Any kind of Canadian fish may be used in making this loaf. If canned fish is used, oil from the tin should be poured in with the ingredients and the bones crushed and left with fish. Bones of fish contain calcium and the oil contains vitamins. Creamed peas or tomato sauce may be served with fish loaf, as well as baked potatoes.

Canadian Fish Foods come from pure, cold water, and they are caught and marketed by the fishing industry in accordance with most approved methods. There's no food more nourishing or healthful.

Get Work Done Now!

During the winter months I am giving a Discount on work done on Drills, Drill Shoes, Plowshares, Harrows, Discs, Acetylene Welding. All kinds of Castings to be Welded.

JOHN GEORGE,
Second Avenue, :: Stony Plain.

Birthday Congratulations

To the Gannon Twins, Gerald and Terence, on their 13th birthday, Feb 19.

Power Farming Did It.

The expansion of agriculture due to rapid mechanization was the dominating factor of the post-war agricultural depression, according to a bulletin on the subject issued by the USA National Bureau of Economic Research. This bulletin was prepared by Dr E Altschul and Dr F Strauss, 2 German economists who came to the USA to make a study of the subject.

Agriculture became mechanized on a wholesale scale during the past 17 years and this led to accelerated production of farm products, which in turn brought on low prices. Mechanized farms had the advantage over non-mechanized farms, but the latter were not forced out of production, but instead increased acreage in order to increase farm income. This in turn made for a further lowering of prices. A wheat price of 40c caused the mechanized farm to lose, whereas the non-mechanized farm still had a small gain due to the fact that the unyielding overhead of the mechanized farm prevented further decrease in cost.
